

JOIN THE LIGHTWEIGHT REVOLUTION

WITH THE ACER XF LEGGERA
TITANIUM DRIVER

Lighter headweight means more distance without more effort

The Acer XF Leggera is designed specifically for those who already hit a fairly straight ball but seeking the maximum amount of distance off of the tee. If you are not of Italian descent, Leggera translates into light and here is how this driver works.

Golfers try to obtain more distance by using a lighter weight shaft, which most do so already. But that is only half of the equation if someone is seeking additional distance. The other component for tape measure drives is to increase the club length for greater leverage. But there is a potential problem. You see, existing head weights are too great to allow drivers to be made longer than they are already today creating a club that feels head heavy and unwieldy. This situation only defeats the purpose of a longer club by resulting into a weak fade or slice off of the tee. And who wants that?

The solution is to marry a lighter weight head to a lighter and longer length shaft which further reduces the overall weight of the club for an even faster clubhead speed. Realize that manufacturers can't just magically remove weight from a massive 460cc titanium driver without some consequences. That is why we shed the weight from only the crown area using a new construction technique. Our super-thin crown technology ensures the center of gravity is in the right place to create those monstrous drives you have only dreamed of.

Greed is good, so go long and not wrong, with the Acer XF Leggera...

SPECIFICATIONS

Club	Loft	Lie	Weight	Face Angle	Volume	RC*
Driver	9.5°	57°	190 g	1° Closed	460 cc	46"
Driver	10.5°	57°	190 g	1° Closed	460 cc	46"
Driver	12°	57°	190 g	1° Closed	460 cc	46"

Face: 6-4 Titanium
Body: 100% Titanium
Hosel Bore: 0.335 in.

Bore Type: M1
Face Height: 55 mm
Breadth: 114 mm

Acer XF Leggera Titanium Driver

Available RH: 9.5°, 10.5°, 12°
Available LH: 10.5°
#TM-1288

MSRP
\$64.95 per clubhead
\$104.95 custom assembled*

* base price assembled with Acer graphite shaft and Karma Black Velvet grip. Prices may vary when choosing other options.

HOW TO PAIR THE LEGGERA FOR MAXIMUM DISTANCE

A typical modern driver weighs about 320g. By smartly pairing the Acer XF Leggera with lightweight shafts and grips, you can easily achieve a club that weighs 275g or less. That translates in faster clubhead speed and more distance, without any extra effort.

In shafts, look to the new generation of lighter weight models. More and more manufacturers are opting to use 55g shafts as their stock shaft offering for further weight reduction and there are some shafts available in the 40g range. The True Ace Death Stick and the new Acculite graphite shafts from Apollo, for example, are available at 45-55g and reasonably priced.

In grips, many lightweight grips are available, notably the WinnLite series, with weights around 25g. Often you will find large weight savings by simply changing out grips.

It is recommended to make the driver at least 1" longer (46"+) to maintain a nice balance and swingweight and to provide more leverage for even greater distance!

The Acer XF Leggera is part of the complete Acer XF family
